DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-19, are drawn to a fuel injector, classified in class 239, subclass 533.200.
- II. Claims 20-22, are drawn to a method of generating turbulent fuel flow through a fuel injector, classified in class 239, subclass 5.
- III. Claims 23-27, are drawn to a method of controlling fuel spray in an orifice of a fuel injector, classified in class 239, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process as claimed can be practiced with another materially different product such as a spraying nozzle for an injection molding process.
3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different

process of using that product (MPEP § 806.05(h)). In the instant case the process as claimed can be practiced with another materially different product such as a laminar induced fuel injector for improved spraying flow.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions do not rely on features from each other to function. Therefore, they can be used in any other fuel injector to achieve the same desired results.
